

30-Day Agentic UX Mastery Plan

From AI-Curious to Agent Architect

WK 01	WK 02	WK 03	WK 04
AGENT ANATOMY	BUILD DEPTH	FRAMEWORKS & LEADERSHIP	VISIBILITY & LANDING
30	3-5	10	4
Days	Hours / Day	Deliverables	Weeks

ABOUT THIS PLAN A structured 30-day sprint for a senior UX designer to go from AI-curious to Agent Architect. 3-5 hours per day. Every day has a morning learning block, an afternoon build block, and an evening reflection block — with curated resources (papers, docs, tools) for all 30 days.							
DAILY RHYTHM <table><tr><td>■ MORNING 1.5 HRS</td><td>Deep Learning — Papers, docs, architecture studies. No building yet.</td></tr><tr><td>■ BUILD 2-3 HRS</td><td>Ship Something Real — Agents, MCP servers, frameworks, artifacts. Daily GitHub commit.</td></tr><tr><td>🌙 EVENING 30 MIN</td><td>Write & Reach — Reflect, draft content, DM connections, update portfolio.</td></tr></table>		■ MORNING 1.5 HRS	Deep Learning — Papers, docs, architecture studies. No building yet.	■ BUILD 2-3 HRS	Ship Something Real — Agents, MCP servers, frameworks, artifacts. Daily GitHub commit.	🌙 EVENING 30 MIN	Write & Reach — Reflect, draft content, DM connections, update portfolio.
■ MORNING 1.5 HRS	Deep Learning — Papers, docs, architecture studies. No building yet.						
■ BUILD 2-3 HRS	Ship Something Real — Agents, MCP servers, frameworks, artifacts. Daily GitHub commit.						
🌙 EVENING 30 MIN	Write & Reach — Reflect, draft content, DM connections, update portfolio.						
10 DELIVERABLES BY DAY 30 01 Design Intelligence MCP Server — 6+ production-grade tools. Shipped by Day 10. 02 3-Agent Design Sprint Pipeline — Researcher + Analyzer + Writer. Day 13. 03 Agentic UX Pattern Library — 12+ patterns, published to GitHub Pages. Day 11. 04 Glass Cockpit v2 Framework — 5 pillars, shareable one-pager. Day 12. 05 UX Evaluation Framework for Agents — 5 dimensions + scoring rubric. Day 18. 06 Portfolio Case Study: Agent UX — Decision-driven, outcome-measured. Day 19. 07 Agentic UX Manifesto — 10 original principles. Day 15.							

- 08 VANTAGE v2 — Agent Mode — Live tools + drift memory. Day 17.
- 09 Long-Form Article + Demo Video — 1800-word position paper + Loom. Day 28.
- 10 Glass Cockpit Talk Proposal — 20-min CFP-ready submission. Day 24.

Built by Puneet Arora

WEEK 01

AGENT ANATOMY

"Learn the machine before you design the soul"

DAY 01

Agent Architecture

■ LEARN

Read Anthropic's tool use docs + the ReAct paper (Yao et al, 2022). Map the 3 core agent paradigms: ReAct, Plan-and-Execute, and Multi-agent orchestration. Understand what separates an orchestrator from an executor.

■ BUILD

Build a visual 'Agent Architecture Atlas' — a one-page, portfolio-quality diagram showing how LLMs, tools, memory layers, and orchestrators connect. Make it something you'd show in a senior interview.

🔗 REFLECT

Write 5 raw UX questions about agents. Your honest confusion is a content goldmine and the seed of every good article.

RESOURCES

- ReAct: Synergizing Reasoning and Acting in LLMs — arxiv.org/abs/2210.03629
- LLM Powered Autonomous Agents — Lilian Weng — lilianweng.github.io
- A Survey of LLM-Based Agents — arxiv.org/abs/2308.11432
- Anthropic Tool Use Docs — docs.anthropic.com/en/docs/tool-use

DAY 02

MCP Protocol

■ LEARN

Read the MCP specification end-to-end at modelcontextprotocol.io. Focus on server architecture, the client-server-tool contract, and how tool schemas are defined. Protocol first, SDK second.

■ BUILD

Set up your MCP dev environment. Run the official quickstart. Sketch the client-server-tool relationship as a UX interaction diagram. Make the protocol visual for a non-technical audience.

🔗 REFLECT

Note 3 design decisions in MCP's architecture you'd either challenge or applaud — and exactly why. Specificity here becomes future article credibility.

RESOURCES

- MCP Official Specification — modelcontextprotocol.io/specification
- MCP Introduction & Core Concepts — modelcontextprotocol.io/introduction
- MCP Architecture Overview — modelcontextprotocol.io/docs/concepts/architecture
- Anthropic MCP Launch — anthropic.com/news/model-context-protocol

DAY 03

First MCP Server

■ LEARN

Study 3 reference MCP servers on GitHub: filesystem, fetch, sequential-thinking. Focus on how tools are named, described, and structured. Tool descriptions ARE the UX of an MCP server.

■ BUILD

Build your first MCP server themed 'Design Research Tools'. Minimum 3 tools: `fetch_competitor_info`, `analyze_ux_patterns`, `summarize_audit_findings`. Python or Node. Make it work end-to-end.

📖 REFLECT

Document the developer experience honestly. Where did you get stuck? What would you design differently? This becomes a case study paragraph or a LinkedIn anecdote.

RESOURCES

- MCP Quickstart: Build Your First Server — modelcontextprotocol.io/quickstart/server
- MCP Python SDK — github.com/modelcontextprotocol/python-sdk
- MCP TypeScript SDK — github.com/modelcontextprotocol/typescript-sdk
- MCP Reference Servers — github.com/modelcontextprotocol/servers

DAY 04

Tool Use Mastery

■ LEARN

Master Anthropic's function calling API: tool definitions, parallel tool use, result handling, error paths, and stop reasons. Read the full tool use cookbook. Know every edge case.

■ BUILD

Build a 3-tool competitive design agent: input = product URL → output = UX patterns detected + dark patterns flagged + improvement recommendations. Use your Trust framework as evaluation lens.

📖 REFLECT

Write a short piece: 'Tool interface design as a UX discipline.' A JSON schema IS an API contract — that's a designer's domain. You've noticed this before most designers will.

RESOURCES

- Anthropic Tool Use — Full Documentation — docs.anthropic.com/en/docs/tool-use
- Anthropic Cookbook: Tool Use — github.com/anthropics/anthropic-cookbook/tree/main/tool_use
- Building Effective Agents — anthropic.com/research/building-effective-agents
- Toolformer paper — arxiv.org/abs/2302.04761

DAY 05

Orchestration Patterns

■ LEARN

Study LangGraph's state machine model and CrewAI's role-based architecture. Focus on orchestration patterns, not implementation details. What does control flow look like from a user's perspective?

■ BUILD

Build a minimal 2-agent pipeline: Researcher agent → Synthesizer agent. Implement proper state passing and clean handoff. Document the state schema — that schema is a UX decision.

🔗 REFLECT

Map the UX mental model challenges. How does a user understand 2 agents in sequence? Sketch the ideal progress UI on paper before building anything.

RESOURCES

- LangGraph Documentation — langchain-ai.github.io/langgraph/
- LangGraph Multi-Agent Tutorial — langchain-ai.github.io/langgraph/tutorials/multi_agent/
- CrewAI Documentation — docs.crewai.com/
- Building Effective Agents (Orchestration) — anthropic.com/research/building-effective-agents

DAY 06

Agentic Products Audit

■ LEARN

Spend 30+ minutes each inside Cursor, Perplexity Deep Research, and one more agentic product — as a power user, not a casual browser. Notice every friction point, trust signal, and confusion moment.

■ BUILD

Create your 'Agentic UX Audit Rubric'. Extend your dark pattern framework to agent interactions. Score each product across: transparency, user control, trust signaling, failure recovery, autonomy calibration.

🔗 REFLECT

Draft a LinkedIn post: '5 patterns I noticed as a UX researcher using AI agents.' Save it — refine and publish with far more authority in Week 3.

RESOURCES

- Google PAIR Guidebook — pair.withgoogle.com/guidebook
- Microsoft HAX Toolkit — microsoft.com/en-us/haxtoolkit/
- NNG AI UX Articles — nngroup.com/topic/ai/
- Apple HIG: Machine Learning — developer.apple.com/design/human-interface-guidelines/machine-learning

DAY 07

Week 1 Synthesis

■ LEARN

Run everything you built this week. Identify your biggest remaining knowledge gap — name it specifically. Vague discomfort is not actionable. A named gap can be closed.

■ BUILD

Push all code to GitHub with proper READMEs. Create a one-page 'Week 1 Learnings' document. Treat it as a portfolio piece, not a notebook entry — it should stand completely alone.

🔗 REFLECT

Update your job search narrative in 3 sentences. How has your understanding of agents shifted? Who are you becoming — and is that visible in your portfolio?

RESOURCES

- How to Write Great READMEs — docs.github.com
- Awesome LLM Agents — github.com/kaushikb11/awesome-llm-agents
- Anthropic Prompt Engineering Guide — docs.anthropic.com/en/docs/prompt-engineering

WEEK 02

BUILD DEPTH

"Ship artifacts, not slides"

DAY 08

Research Agent Design

■ LEARN

Map how a senior UX researcher actually works: what sources, how they synthesize, what outputs matter. This becomes your agent's job description — the system prompt IS a job description.

■ BUILD

Spec and build a 'UX Research Synthesis Agent'. Tools: `web_search`, `read_pdf`, `synthesize_findings`, `generate_insight_report`. System prompt = expert UX researcher persona with your methodology baked in.

🔗 REFLECT

Document your agent persona design decisions. What values, constraints, and tone did you encode? Why? This paragraph is already a case study section — write it like one.

RESOURCES

- Anthropic System Prompts — docs.anthropic.com/en/docs/system-prompts
- Building Effective Agents (Workflows) — anthropic.com/research/building-effective-agents
- Anthropic Cookbook: Agents — github.com/anthropics/anthropic-cookbook/tree/main/agents
- Chain-of-Thought Prompting — arxiv.org/abs/2201.11903

DAY 09

Agents + The Real World

■ LEARN

Study how agents handle auth, pagination, rate limits, and API errors in production. Real tools break in real ways. Your agent must degrade gracefully — that's a UX design problem.

■ BUILD

Extend your research agent with real data sources. Deliberately break it: kill the API mid-task, send malformed queries, exceed rate limits. Document every failure mode you discover.

📖 REFLECT

Write '5 UX Patterns for Agent Failure States'. What does good recovery look like from a designer's perspective? This is original, immediately usable content.

RESOURCES

- LangSmith: Agent Observability — smith.langchain.com/
- LLM Application Patterns — Eugene Yan — eugeneyan.com/writing/llm-patterns/
- Anthropic Cookbook: Long Context — github.com/anthropics/anthropic-cookbook/tree/main/long_context
- Microsoft Promptflow Testing — microsoft.github.io/promptflow/

DAY 10

Production MCP Server

■ LEARN

Study MCP patterns for multi-tool servers. Focus on: tool discoverability, description quality, schema clarity, and backward compatibility. A well-described tool is a well-designed tool.

■ BUILD

Build 'Design Intelligence MCP Server' — minimum 6 tools: `competitor_analysis`, `heuristic_audit`, `dark_pattern_scan`, `pattern_lookup`, `trend_synthesis`, `accessibility_check`. Production-grade.

📖 REFLECT

Write about 'tool description as microcopy'. Writing an MCP schema requires UX writing skills. This bridge is yours to claim as a designer-builder.

RESOURCES

- MCP Server Debugging — modelcontextprotocol.io/docs/tools/debugging
- FastMCP Python Framework — github.com/jlowin/fastmcp
- MCP Specification: Tools — modelcontextprotocol.io/specification
- MCP Reference Servers Source — github.com/modelcontextprotocol/servers

1

DAY 11

Pattern Library v0

■ LEARN

Read Google PAIR Guidebook, Microsoft HAX Toolkit, and Nielsen's AI UX principles. Catalog every existing agentic interaction pattern you find. The gaps in the literature are where your authority lives.

■ BUILD

Build the 'Agentic UX Pattern Library' as a published interactive HTML. Minimum 12 patterns, each with: problem statement, solution, real-world example, and anti-pattern. Your biggest visibility asset.

🔗 REFLECT

Name 3 patterns missing from existing literature. Own those names. A pattern with your name attached is a citation waiting to happen.

RESOURCES

- Google PAIR Guidebook — pair.withgoogle.com/guidebook
- Microsoft HAX Toolkit — microsoft.com/en-us/haxtoolkit/
- NNG AI Interaction Patterns — nngroup.com/topic/ai/
- Deceptive Design Reference — deceptive.design/

1

DAY 12

Glass Cockpit v2

■ LEARN

Revisit your Glass Cockpit concept from Deloitte prep. Study aviation HMI: situation awareness, mode confusion, control handoff, out-of-the-loop syndrome. Each has a direct agent UX parallel.

■ BUILD

Expand Glass Cockpit into a full 'Agentic UX Framework' with 5 named pillars: Situational Awareness, Control Handoff, Progress Transparency, Graceful Failure, Trust Calibration. One-pager.

🔗 REFLECT

Draft your 3-sentence framework elevator pitch. A framework with a name, 5 pillars, and real examples is quotable. Make yours quotable.

RESOURCES

- Endsley Situation Awareness (1995) — tandfonline.com
- Mode Confusion in Aviation — NASA — ntrs.nasa.gov/citations/19960010637
- HAX Transparency Guidelines — microsoft.com/en-us/haxtoolkit/toolkit/transparency/
- Out-of-the-Loop Syndrome — Parasuraman & Manzey — journals.sagepub.com

1

DAY 13

3-Agent Pipeline

■ LEARN

Study state management across multi-agent systems. How does context degrade between agents? Context degradation is a design problem with measurable UX consequences.

■ BUILD

Build a 3-agent 'Design Sprint Intelligence System': Researcher → Pattern Analyzer → Recommendation Writer. Implement the full UX flow including progress indicators and user checkpoints.

🔗 REFLECT

Document every human-in-the-loop decision point. Where did you want to pause and ask the user? That list IS your answer to 'how do you design human-AI collaboration?'

RESOURCES

- LangGraph: Agent Supervisor Pattern — langchain-ai.github.io/langgraph/tutorials/multi_agent/
- LangGraph: State Persistence — langchain-ai.github.io/langgraph/concepts/persistence/
- Building Effective Agents (Multi-Agent) — anthropic.com/research/building-effective-agents
- Guidelines for Human-AI Interaction (Amershi 2019) — dl.acm.org/doi/10.1145/3290605.3300233

1

DAY 14

Week 2 Synthesis

■ LEARN

Record yourself explaining your best build in 5 minutes (Loom). Watch it back. What you can't explain clearly, you don't understand well enough yet.

■ BUILD

Publish the Pattern Library to GitHub Pages. Update your portfolio to link all 3 builds. Write a LinkedIn-ready one-liner for each project. Test every demo on your phone.

🔗 REFLECT

Send 5 genuine DMs to AI/UX people on LinkedIn — share an interesting observation, not a job request. Real conversations open real doors. Templates close them.

RESOURCES

- GitHub Pages — pages.github.com/
- Loom — Screen Recording — loom.com
- Make a README — makeareadme.com

WEEK 03

FRAMEWORKS & LEADERSHIP

"Your 15 years becomes your unfair advantage"

1

DAY 15

The UX Manifesto

■ LEARN

Study how landmark frameworks were written: Nielsen's 10 heuristics, Norman's 7 stages, Dieter Rams' 10 principles. What makes a framework endure? Specificity, stakes, and a named position.

■ BUILD

Write '10 Principles for Designing Agentic AI Experiences' — your original manifesto. Format it as a publishable, shareable HTML or PDF. Lead with the principle you'd stake your reputation on.

🔗 REFLECT

Which principle goes first? The answer reveals what you believe most deeply. A manifesto without conviction is just a listicle with a pretentious title.

RESOURCES

- Nielsen's 10 Heuristics — nngroup.com/articles/ten-usability-heuristics/
- Dieter Rams 10 Principles — vitsoe.com/us/about/good-design
- Norman's 7 Stages of Action — interaction-design.org
- Stanford HAI Principles — hai.stanford.edu

1

DAY 16

Trust & Dark Patterns

■ LEARN

Deep-dive into automation bias, appropriate reliance, and calibrated trust (Parasuraman, Lee, Muir). When do people over-trust agents? What are the documented costs of each error type?

■ BUILD

Extend your Trust & Dark Pattern GPT with 10 agent-specific dark patterns: ghost agency, false certainty, invisible override suppression, permission creep, action laundering, confidence theater.

🔗 REFLECT

Write 3 paragraphs: 'Why UX designers are the last line of defense in the agentic age.' Don't edit. Just write. This becomes the opening of your long-form article.

RESOURCES

- Trust in Automation: Lee & See (2004) — journals.sagepub.com/doi/10.1518/hfes.46.1.50_30392
- Automation Bias — Goddard et al (2012) — pubmed.ncbi.nlm.nih.gov/22392598/
- Deceptive Design Hall of Shame — deceptive.design/
- Anthropic AI Safety Research — anthropic.com/research

1

DAY 17

VANTAGE -> Agent Mode**■ LEARN**

Study how static analysis engines end and living agents begin. That boundary is a design decision. This is where your strategic intelligence tool becomes something alive.

■ BUILD

Architect and ship VANTAGE v2 as a true agentic system. Add: `web_search` for live data, persistent memory for drift detection, a proper debate-model with actual competing agent turns.

 REFLECT

Document the evolution as a case study: 'How I turned a static GPT into a living intelligence engine.' The before/after IS the story. Write both paragraphs today.

RESOURCES

- LangGraph Persistence & Memory — langchain-ai.github.io/langgraph/concepts/persistence/
- Anthropic Cookbook: Summarization — github.com/anthropics/anthropic-cookbook
- AI Safety via Debate (Irving 2018) — arxiv.org/abs/1805.00899
- Building Effective Agents (Augmenting LLMs) — anthropic.com/research/building-effective-agents

1

DAY 18

UX Evaluation Framework**■ LEARN**

Study agent evaluation: RAGAS, LLM-as-judge, behavioral testing. Understand what 'good' means from both engineering and user-centered perspectives. The gap between those views is your design space.

■ BUILD

Create the 'UX Evaluation Framework for Agentic Systems'. Dimensions: task completion rate, trust calibration accuracy, cognitive load, failure recovery success, perceived control satisfaction.

 REFLECT

This framework doesn't exist in the literature yet. That's not an oversight — it's a gap you're uniquely qualified to fill. Treat it as a contribution, not a checkbox.

RESOURCES

- RAGAS Evaluation Framework — docs.ragas.io/
- MT-Bench & Chatbot Arena (Zheng 2023) — arxiv.org/abs/2306.05685
- HELM Holistic Evaluation — crfm.stanford.edu/helm/
- Human-AI Task Evaluation (ACM CHI) — dl.acm.org

1

DAY 19

Portfolio Case Study

■ LEARN

Study 3 strong UX case studies from real product teams. What structure makes them memorable? Problem framing, key insight, decision + tradeoff, measured outcome — what's missing from yours?

■ BUILD

Write the full case study for your best agent build. Include agent-specific UX challenges solved, tradeoffs made consciously, and what you'd do differently. Honesty is credibility.

👉 REFLECT

Get feedback from 1 design peer and 1 non-designer. The non-designer represents your hiring manager. What confused them? Fix those things first.

RESOURCES

- UX Portfolio Case Studies — NNG — nngroup.com/articles/ux-portfolio-case-study/
- Writing About Design Decisions — A List Apart — alistapart.com
- Senior UX Case Studies — careerfoundry.com

2

DAY 20

Company Intelligence

■ LEARN

Research your top 10 target companies' agent and AI products in depth. Use VANTAGE v2 if it's live. Know their current agent UX better than their own product team does.

■ BUILD

For your top 5 companies: write a one-page 'how I'd improve their agentic UX' brief using Glass Cockpit as your analytical lens. These become your interview answers.

👉 REFLECT

Practice 'How would you redesign their agent experience?' out loud. Record yourself. The first answer will be mediocre. The fifth will be interview-ready.

RESOURCES

- Perplexity Deep Research — perplexity.ai/
- CB Insights AI Market Intelligence — cbinsights.com/research/artificial-intelligence/
- LinkedIn Company Job Postings — linkedin.com/jobs/

DAY 21

Week 3 Synthesis

■ LEARN

Name 2 things you still don't understand well enough — specifically. Vague discomfort is not actionable. Decide: close the gap in Week 4, or consciously de-prioritize.

■ BUILD

Write and schedule your LinkedIn post: 'I spent 3 weeks deep in agentic UX. Here's what I found — and what the existing literature is missing.' This is your signal flare.

🔗 REFLECT

DM 3 hiring managers or senior design leaders with something genuinely interesting from your work. A framework observation. Not a job ask — a conversation starter.

RESOURCES

- LinkedIn Algorithm Report — search 'Richard van der Blom LinkedIn algorithm'
- Thought Leadership Writing — laraacosta.com
- Learn in Public — swyx.io/learn-in-public

WEEK 04

VISIBILITY & LANDING

"Make them find you, not the other way around"

DAY 22

Portfolio Overhaul

■ LEARN

Audit your current portfolio against 5 actual job descriptions you want. Score the gap honestly on 1-5 for each JD requirement. This is strategic gap analysis, not self-critique.

■ BUILD

Add all 3 agent projects to your portfolio as interactive cards with live demos. Test on mobile. Everything must load and impress in under 30 seconds.

🔗 REFLECT

Update LinkedIn Featured section with the Pattern Library link and your best Loom demo. These are first-impression assets. Optimize like a landing page.

RESOURCES

- AI Design Roles — linkedin.com/jobs/search/?keywords=AI+UX+Lead
- UX Portfolio Checklist — NNG — nngroup.com/articles/ux-portfolio/
- GitHub Pages Hosting — pages.github.com/

DAY 23

The Long-Form Article

■ LEARN

Study the top 5 AI/design articles that spread on LinkedIn. What made them travel? Specificity of insight, a contrarian position, or a framework people could immediately apply?

■ BUILD

Write 'Designing for the Age of Agents: A Framework for the World After Chatbots' (~1800 words). This is not a blog post — it's a position paper. Lead with your most defensible insight.

📌 REFLECT

Schedule publication for Day 28. Send to 3 trusted readers first. A great article on Day 28 beats a perfect one that never ships.

RESOURCES

- Writing Well — Paul Graham — paulgraham.com/writing44.html
- LinkedIn Articles vs Posts — linkedin.com/pulse/
- Substack for Ownership — substack.com/

DAY 24

Speaking Opportunities

■ LEARN

Map AI/design conferences, UX community talks, and company meetups in the next 6 months. Build a list of 10 realistic submission targets. Speaking is the highest-credibility signal per effort.

■ BUILD

Prepare a 20-minute talk proposal: 'The Glass Cockpit: Designing Trust and Control in Agentic AI.' Write the abstract, 3 key audience takeaways, and your speaker bio.

📌 REFLECT

Submit to 3 CFPs. DM 3 community organizers with the proposal directly. Speaking beats writing beats posting — in that order, on credibility signal per hour.

RESOURCES

- Sessionize CFP Aggregator — sessionize.com/
- PaperCall CFP Discovery — papercall.io/cfps
- Notist Speaker Portfolio — noti.st/

DAY 25

The Target 20 Roles

■ LEARN

Deep-read 5 JDs from your target companies. Map every bullet point to something you've built in the last 25 days. Anything you can't map is a gap — address it or de-prioritize that role.

■ BUILD

Tailor your resume narrative and portfolio intro for your top 5 roles. Write each cover note as if it's the only one you're sending today — because to that reader, it is.

📌 REFLECT

Apply to all 5. Send them today. No more refining. Launched imperfectly beats perfected and sitting in drafts. Momentum is a competitive advantage.

RESOURCES

- LinkedIn Jobs: AI Experience Lead — linkedin.com/jobs/
- Wellfound AI-native Companies — wellfound.com/
- Levels.fyi Compensation Benchmarking — levels.fyi/

DAY 26

Network Activation

■ LEARN

Map your 10 warmest connections at target companies: past colleagues, mutual LinkedIn connections, people you've interacted with. Warm beats cold by at least a factor of 10.

■ BUILD

Write a personalized outreach note for each. Structure: specific about their work → interesting observation from yours → natural opening. No job asks in the first message. Ever.

📌 REFLECT

Send all 10. Same day. You've met the quality bar. Now play the numbers.

RESOURCES

- LinkedIn InMail Tips — linkedin.com/business/sales/blog
- The 5-Minute Favor — Adam Grant — adamgrant.net
- LinkedIn Network Search — linkedin.com/search/results/people/

DAY 27

GitHub as Portfolio

■ LEARN

Study the GitHub profiles of 5 AI/design engineers you respect. What do their READMEs do that yours don't? How do they make a technical repo feel like a designed object?

■ BUILD

Write compelling READMEs for your 3 agent projects. Create a public 'AI + UX Frameworks' repo with your Pattern Library, Evaluation Framework, and Manifesto. Pin your 6 best repos.

🔗 REFLECT

GitHub is the resume of builders. This repo must exist before your next interview. It proves you didn't just think about this — you built it.

RESOURCES

- GitHub Profile README Guide — docs.github.com
- Awesome GitHub Profile READMEs — github.com/abhisheknaidu/awesome-github-profile-readme
- Shields.io README Badges — shields.io/

DAY 28

Demo Day

■ LEARN

Study the best product demo videos — not feature tours. Notice: clear narrative arc, decisions explained, a strong 'so what' that lands in the first 60 seconds.

■ BUILD

Record a 7-minute Loom of your most impressive agent build. Narrate design decisions, not just features. Post on LinkedIn. Publish your long-form article today too — both, same day.

🔗 REFLECT

Reply personally to every comment on both. The conversation IS the visibility — and compound interest applies to conversations.

RESOURCES

- Loom — Screen Recording — loom.com
- Product Demo Tips — articles.ue.com/product_demos/
- LinkedIn Video Best Practices — linkedin.com/help/linkedin/answer/a527692

DAY 29

Interview War Room

■ LEARN

Practice 10 agentic UX design questions cold: 'How would you design an agent for X?', 'How do you handle trust calibration?', 'What's your agent transparency framework?' Record each. Listen back.

■ BUILD

Write your differentiated hiring narrative — 3 tight paragraphs: who you are specifically, why agentic UX is your domain, why this company and role now. Zero generic language.

🔗 REFLECT

Run a mock interview with a peer. Ask them to push back hard. The interview you dread is the one that prepares you most. Debrief for 20 minutes after.

RESOURCES

- Design Leadership Interview — NNG — nngroup.com/articles/design-leadership-interview/
- Designing ML Products — Chip Huyen — huyenchip.com
- The Mom Test — Rob Fitzpatrick — momtestbook.com/

DAY 30

Launch Day

■ LEARN

One honest final review: what did you build, learn, and ship this month? Write 5 bullet points. Growth only compounds when you document it — otherwise it evaporates.

■ BUILD

Send your portfolio update to everyone in active job conversations. Subject: 'I've been building — here's what I shipped.' Include demo link, Pattern Library, and article. Make it easy to forward.

🔗 REFLECT

You are no longer 'a UX leader interested in AI.' You are the designer who actually ships agents, publishes frameworks, and understands MCP from the inside. That is a different market value. Own it.

RESOURCES

- Your Portfolio — puneetindeelhi940.github.io/portfolio
- Anthropic Careers — anthropic.com/careers
- Wellfound AI Roles — wellfound.com/
